Hellow word

Here is some text

```
def calculo_cac(marketing_expense : float, num_customer : float) -> float:
    """
    summary: Calculo de adquisición por cliente (CAC)

    Args:
        - marketing_expense (float): Costos de adquisición del cliente
        - num_customer (float): numero de clientes

    Returns:
        float: CAC
    """

    CAC = marketing_expense/num_customer

    return CAC

for i in range (10):
    print(i)
